## Experts and patients opinions:

"So little effort for such a positive patient response. My menopause patients are so thankful for helping them!"

*Dr. Scott Evan Eder, Gynecologist,  
New Jersey, US*

"Would not have expected such a comfortable procedure."

*Ann, FemTouch patient*

"I believe this state of the art, minimally invasive outpatient procedure could be life changing for women".

*Miss Smita Rajshekhkar, Obstetrician  
and Gynecologist, UK*

"I am excited to add FemTouch treatment to my practice as this comfortable and easy procedure was demonstrating high satisfaction with my patients. This technology leads to good clinical outcomes."

*Dr. Massimiliano Marziali, GYN, Rome, Italy*

# Why FemTouch™?

## Fast

Simple and comfortable out-patient procedure taking just a few minutes

## Efficient

Satisfying outcomes after just 2-4 sessions

## Simple

No anesthesia or special post procedure care is required

# What should I expect?

### When will I see results?

Typically 2-4 treatments are needed to achieve the desired outcome on the vaginal lining. In clinical evaluations women reported feeling improvement already after 1-2 treatments.

### What can I expect after treatment?

Immediately after treatment you may feel a very mild heat sensation in which case your treatment provider can prescribe a hydrating gel. This sensation usually should not last longer than a few hours.

# What is it?

FemTouch™ is an out-patient, minimally invasive, non-surgical, non-hormonal laser vaginal procedure, that stimulate new collagen production for healthier tissue. Developed by Lumenis®, the leading company for aesthetic medical laser devices, in collaboration with leading gynecologists, Lumenis® now offers a simple treatment for vaginal health conditions.

# Is it right for me?

Lumenis® CO<sub>2</sub> laser procedures are not suitable for everyone, for example patients who have taken Accutane® (Isotretinoin) within the past 6-12 months, or have a history of keloid formation. Risks may include change of pigmentation, infection, redness, textural changes or scarring. Be sure to consult your physician regarding treatment options available and related contraindications and risks based on your individual concerns and medical history, before choosing a treatment.

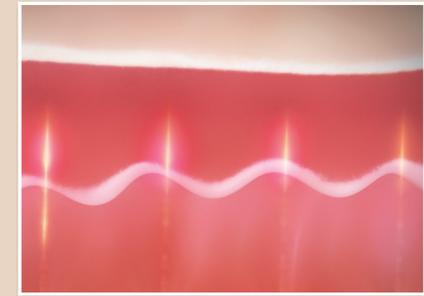

# How does it work?

### FemTouch™ technology

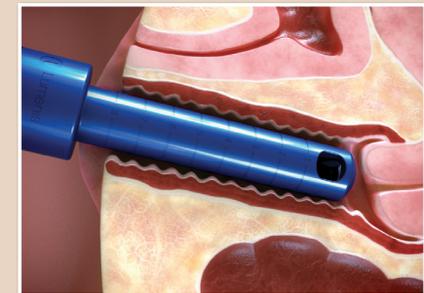

FemTouch™ is an innovative CO<sub>2</sub> laser technology, enabling to apply precise and controlled laser microbeams on the vaginal lining. This allows stimulation of new tissue growth, by triggering collagen production.

### The treatment

Before treatment, your physician should assess your vaginal health to ensure you are a good candidate for the treatment. During the treatment, your physician will move the sterilized applicator along the vaginal wall in an outward motion, applying the laser in a 360° pattern covering the entire area. The whole procedure should take just a few minutes. You may experience a minor heat sensation during the treatment but it is very gentle and you should not feel uncomfortable.

Fractional laser beams are applied along the vaginal wall.
